

Test Drive™ on Dell PowerEdge Gen AI

Workshop Description

The PowerEdge AI Test Drive is a complete technical overview of Dell Technologies' industry-leading server platform. It's the basis for many of the technology solutions being built and integrated by Dell Technologies into their own products, and by customers that rely on Dell Technologies to run their most critical workloads.

This Test Drive provides an in-depth technical look at how the server advancements found within the 16th generation platforms and systems management feature help address IT departments ever changing needs. We will discuss and include hands on demonstrations for platform and server lifecycle management including remote system (iDRAC) and full datacenter systems management (Dell EMC OpenManage Enterprise). Since integration and automation are critical in today's business, we also explore AI and ecosystem integration.

Who Should Attend

You'll gain the most from this workshop if you have familiarity with your organization's data center server and virtualization technologies.

What's in it for you?

- Learn industry advancements and impacts to your server infrastructure & staff
- Discuss and get hands on lab experience with best-in-class systems management tools
- Gain valuable insight to integrations and ecosystem connections with VMware

The Test Drive will cover:

Overview

- How PowerEdge helps you achieve your business goals
- PowerEdge Servers - your innovation engine
- Dell Technologies and VMware

PowerEdge Architectures

- PowerEdge Family review
- Aligning workloads to the product family
- CPU flexibility with AMD and Intel
- Innovations
- Cooling strategies
- iDRAC 9

Operations & Management

- OpenManage Enterprise
- OpenManage Enterprise integration for VMware vCenter
- Aria
- Generative AI - ChatBot

Support and Labs

- Support programs
- Additional learning resources
- Next steps
- Hands-on labs
